

Press Release

NEXTCHAIN IS BORN, A NEW GENERATION OF DIGITAL SOLUTIONS FOR THE MODERN SUPPLY CHAIN

NEW INNOVATIVE START-UP OF THE SEDAPTA GROUP

Mantua, April 2nd, 2021 - sedApta Group is pleased to announce the constitution of NextChain Srl. The new company was established by MBO Partners s.r.l. (reference partners Giuseppe Bottini and Franca Brescia) and Atomos Hyla SpA, a company of the sedApta Group specialized in the digitization of processes in the Supply Chain area.

The new company counts on a team of more than thirty consultants who have been working successfully for more than 20 years with a highly loyal direct customer base.

The innovative strength of NextChain arises, first of all, from an in-depth knowledge of Supply Chain processes, especially on logistics and transport chain management processes. In addition to accompanying its customers in the adoption of new technologies, the team, starting from 2014, has developed in-depth knowledge in the SAP-EWM field to the point of becoming, in the last 5 years, the protagonist of several EWM projects in important industrial realities, becoming the main SAP reference of the solution.

"Our customers' supply chains are undergoing a profound transformation of processes", says Giuseppe Bottini, CEO of NextChain. "E-commerce, the complete traceability of the order fulfilment phases, the changes in the management of end customer expectations, are among the main drivers of this transformation which, on the other hand, requires a strong integration of logistics to support production processes. With this in mind, the collaboration with Atomos Hyla and the sedApta Group was born; the goal is to help our customers to provide continuity between planning and execution processes".

"The whole Group is enthusiastic about this new initiative which fits perfectly with our vision of the Supply Chain of the future", comments Giorgio Cuttica, CEO of the sedApta Group and president of the new company.

"We are talking about increasingly integrated and extended Supply Chains, where a timely change within the logistics chain must be analysed in real time and contextualized with other Big Data to support increasingly complex decision-making processes. With this in mind, we are already working on new AI / ML systems to automate entire process components, bringing the speed of execution closer to the actual demands of a market that is increasingly in real time".
